- Communications Fund (iii)	2,403	<i>n.a.</i>	<i>n.a.</i>	<i>n.a.</i>	<i>n.a.</i>	<i>n.a.</i>
- Residential mortgage backed securities	-	6,024	7,017	7,169	7,889	7,919
Total assets managed	34,706	38,710	29,479	23,624	31,944	33,785

(a) The values in the table are face or par value for debt and assets and, for interest rate swaps, the notional value (on which the interest coupons are calculated).

(i) Debt holdings include all Commonwealth Government Securities on issue; excluding those issued on behalf of the States and Territories or held by the Commonwealth, and overdues. This is not the same as Commonwealth general government gross debt, as published in the Budget Papers, which includes other liabilities including those not managed by the AOFM.

(ii) Loans by the Commonwealth to State and Territory Governments under various Commonwealth-State Housing Agreements.

(iii) The Communications Fund is not part of the AOFM Financial Statements, but was managed for the Department of Broadband, Communications, and the Digital Economy by the AOFM. The Communications Fund was closed on 1 January 2009 and the assets transferred to the Building Australia Fund.

n.a. Not applicable.

- Housing advances to the States	<i>n.a.</i>	<i>n.a.</i>	<i>n.a.</i>	<i>n.a.</i>	<i>n.a.</i>	<i>n.a.</i>
- Communications Fund (viii)	2,381	<i>n.a.</i>	<i>n.a.</i>	<i>n.a.</i>	<i>n.a.</i>	<i>n.a.</i>
- Residential mortgage backed securities (ix)	-	5,901	6,905	7,129	7,851	7,849
Total assets managed	<u>31,480</u>	<u>35,486</u>	<u>26,212</u>	<u>20,435</u>	<u>28,275</u>	<u>30,690</u>

(b) The market value measures the value of the assets and liabilities based on current market yields. The valuations are based on market close end of day rates.

(i) Treasury Bonds, Treasury Notes and other miscellaneous domestic debt are valued using a discounted present value of cash flows methodology using a zero coupon curve based on overnight indexed swap rates and liquid Treasury Bond yields.

(ii) Treasury Indexed Bonds are valued using the RBA secondary market pricing formula and market yields to maturity.

(iii) Foreign loans are valued using a discounted present value of cash flows methodology using a zero coupon curve based on the US swap curve and expressed in AUD equivalent terms using an end of day exchange rate.

(iv) Interest rate swaps are valued using a discounted present value of cash flows methodology using a zero coupon curve based on the AUD swap curve.

(v) Holdings of term deposits with the RBA are valued using a discounted present value of cash flows methodology using a zero coupon curve based on AUD overnight indexed swap rates.

(vi) Investments in State & Territory government bonds and Kangaroo bonds are valued using a secondary market pricing formula and the end of day market yields.

(vii) Negotiable certificates of deposit (NCDs) and bank accepted bills (BABs) are valued flat to the Bank Bill Swap (BBSW) curve.

(viii) The Communications Fund consisted mainly of NCDs and BABs. The Communications Fund investments were valued flat to the BBSW curve for 30 June 2008.

(ix) Investments in RMBS are valued using a secondary market pricing formula using BBSW and traded margins. For investments for which reliable traded margin data is not available, the margins are assumed unchanged from those at the time of issue.

(x) The AOFM undertook a \$4 billion TIB issuance on 30 September 2009. Since it had not settled at this time, the increase in the market value of the liability is being offset by the proceeds receivable on this date.

Total assets managed	0	-1.08	-0.05	-0.10	-0.50	-0.36

(c) The sensitivity is measured as the change in market value that would result from a one basis point (0.01 percentage point) increase in all market yields. A positive number denotes a decrease in the market value of debt or an increase in the market value of assets, whereas a negative number denotes an increase in the market value value of debt or a decrease in the value of assets.

(i) The increase in market yields is taken to be reflected fully in real yields on TIBs with no change in inflation.

(ii) The sensitivity figure for RMBS investments measures the sensitivity to short term BBSW resetting on the investments. These investments also have a significant sensitivity to changes in the traded margin on these transactions as they have a fixed margin that applies over the life of these deals.

(e) The average term to repricing measures the average period to when the interest rate on assets and liabilities is reset. For fixed interest rate securities this is the maturity date when debt is refinanced and for floating interest rate securities this is the next interest rate reset date. The weighted average period to the repricing across portfolios is based on face value / notional value weightings.

(i) The calculation for TIBs reflects when the coupon is reset. It does not take account of Kt uplifts for inflation outcomes.

(f) The average term to maturity measures the average contractual term remaining on the debt, asset or interest rate swap instrument. The weighted average period to maturity across portfolios is based on face value / notional value weightings.

(i) The term to maturity reflects the legal maturity date for the RMBS issue. These securities typically pay down well ahead of the legal maturity date as the mortgages backing the security are repaid.
